Blažević number (No). Glucosinolate (GSL). Glucosinolates partially characterized with reasonable evidence for one single structure to be naturally biosynthesized in plants [in brackets].

Eq. A1. The glucosinolates results were expressed in mmol.kg⁻¹ of DM (following the standard) with this formula.

$$\left(\frac{\left(\frac{AUC - b}{a} \right)}{Q} \right) * V$$

AUC = sum of corrected area (total glucosinolates content) or individual corrected area (individual glucosinolate content)

b = interception of desulfo-sinigrin calibration curve (μM)

a = slope of desulfo-sinigrin calibration curve (μM)

Q = starting material in mg of DM

V = final volume for HPLC in mL

Eq. A2. The camalexin results were expressed in $\mu\text{g.g}^{-1}$ of DM with this formula.

$$\left(\frac{\left(\frac{AUC - b}{a} \right)}{Q} \right) * V$$

AUC = area under the curve of camalexin

b = interception of camalexin calibration curve ($\mu\text{g.mL}^{-1}$)

a = slope of camalexin calibration curve ($\mu\text{g.mL}^{-1}$)

Q = starting material in g of DM

V = final volume for HPLC in mL
